

# Odoo Version End-of-Life Calendar

Odoo's support window is 3 years for Enterprise and 2 years for Community from release. After EOL, no more security patches or bug fixes. Plan your migration runway before the window closes.

## Support status snapshot

- Odoo 18 (Oct 2024) — EE supported until Oct 2027, CE until Oct 2026.
- Odoo 17 (Nov 2023) — EE supported until Nov 2026, CE until Nov 2025.
- Odoo 16 (Oct 2022) — EE supported until Oct 2025, CE ended Oct 2024.
- Odoo 15 (Oct 2021) — EE ended Oct 2024, CE ended Oct 2023.
- Odoo 14 (Oct 2020) — fully EOL.
- Odoo 13 and earlier — fully EOL. Running production here is a security liability.

## What 'EOL' means in practice

- No security patches — unpatched CVEs accumulate.
- No bug fixes — regressions you discover are yours to work around.
- Ecosystem modules (OCA, third-party) stop releasing compatible versions.
- Hosting providers (including Odoo.sh) may refuse to host EOL versions.

## Recommended migration runway

- Start scoping 6 months before your version's EOL date.
- Small estate ("d 50 users, few custom modules): 8–12 weeks end-to-end.
- Medium estate (50–250 users, moderate custom): 12–20 weeks.
- Large / complex estate: 20–40 weeks — expect multi-step hops if you're 3+ versions behind.

## When to jump which gap

- +1 version: almost always a direct jump.
- +2 versions: usually direct; plan extra customization-porting time.
- +3 versions: often multi-step (via an intermediate hop) for stability.
- +4 or more: always multi-step. Each hop bounds the transformation risk.
